

Product Information - personalFloww®

The personalFloww has been developed specifically to improve your quality of life in a wireless environment. The personalFloww works like a transformer and converts electromagnetic radiation into natural body frequencies - a field we call the Floww Field.

The personalFloww comes in two sizes: Small and Medium. The medium version is more powerful than the small version and is mainly suitable for men and boys over 12 years. The small version is suitable for women and children under 12 years.

How does the personalFloww work?

The personalFloww was developed in accordance with the principle of resonance. It consists of a circuit of electronic components which respond to the electromagnetic (EMF) radiation emitted by one or several radiation sources, such as a UMTS mast or high-voltage cables. The personalFloww resonates with this EMF radiation and creates a subtle but distinct field which is 'fed' by the ambient radiation. This field serves to offset the possibly harmful EMF radiation.

Range

The personalFloww creates a Floww Field of approximately 2 metres around you - this will vary depending on the strength of the surrounding radiation. For effective operation the personalFloww should be carried within a radius of at least 0.5 metre from your body.

What is Floww Health Technology?

Floww International develops and manufactures technological products which utilise radiation to create a Natural Floww Field. The goal of the natural Floww Field is to protect people from radiation using a natural process. The technological products are collectively known as Floww Health Technology. People who use Floww Health Technology report feeling more relaxed and more energetic.

Can EMF radiation influence our health?

The human body can experience disturbances in EMF radiation loaded environments, when the EMF radiation originates from, amongst other sources, wireless internet, transmitters for mobile phones, wireless telephones (DECT) and wireless routers. EMF radiation can be absorbed by the body, which can subsequently affect health and wellbeing.

For information about medical complaints which can be a result of EMF radiation see the warning from German doctors and professors, who have noticed a connection between electromagnetic EMF radiation and a number of medical complaints, such as headaches, fatigue and problems with concentration (source: Freiburger Appeal 09-10-2002). For more information and scientific research regarding EMF radiation and health contact Bio Circuitry.

Use of the personalFloww with other Floww products

The personalFloww was developed to be used on its own or in conjunction with the mobileFloww and homeFloww products. The personalFloww is designed to protect you from EMF radiation while you are out and about.

Disclaimer

Floww Health Technology products are not medical devices. You should always consult your doctor if you have a medical complaint. Only use Floww products as advised by your doctor or therapist or as instructed on the instructions for use.

Instructions for use - personalFloww

During the day keep your personalFloww close to your body. For example in your bag or the pocket of your trousers or jacket, for women this could also be in the bra.

At night, keep it under your pillow or place it on the bedside table. For optimal sleep, we recommend a homeFloww set. This has been designed specifically for the home, the personalFloww has been developed for use on the road.

The personalFloww interacts with your own bio-field in accordance with the principle of bio-resonance so for optimal performance, we recommend strict personal use of the personalFloww during the first two weeks. Some people are highly sensitive to radiation, electro-hypersensitive (EHS), or do not know whether they are. We recommend you to gradually build your use of the personalFloww by alternatively carrying it with you for an hour and then removing it for the next.

For a gradual build-up, we recommend you not to place the personalFloww on your bedside table or under your cushion overnight immediately, but to wait up to two weeks.

If you have installed a homeFloww set you do not need to keep your personalFloww with you when you are at home.

One size does not fit all

personalFloww comes in two sizes: small for women and children under 12; and medium for men. Women and men are different and for that reason the personalFloww comes in two sizes. The medium version is more powerful than the small version and is more suitable for men and boys over 12 years. The small version is developed for women and children under 12 years.

The reason for this difference is that women are more sensitive to non-ionising radiation from sources such as mobile phones and Wi-Fi and because of this women are also more sensitive to the Floww Field and so do not need a strong field for it to be effective. There is no relationship between physical size and which personalFloww you should have. The difference appears to be related to the endocrine system and because women have a more complex hormonal system than men.

Possible withdrawal symptoms

During the first week of use of your personalFloww it is possible you may experience mild withdrawal symptoms which can include mild headache or nausea. We believe this is because the body is no longer being exposed to the distorted frequencies it has become accustomed too. If these symptoms persist for more than a week please contact Bio Circuitry if you are in Australia.

When you first start using Floww Health Technology products make sure you drink sufficient water. The recommended amount for adults is at least 1.5 litres per day. Children over 12 years of age should drink at least 1 litre per day and children under 12 years of age half a litre per day.

Disclaimer

Floww Health Technology products are not medical devices. You should always consult your doctor if you have a medical complaint. Only use Floww products as advised by your doctor or therapist or as instructed on the instructions for use.
