

Product Information - screenFloww®

The screenFloww has been developed to help protect and maintain the natural energy of the human system while in the vicinity of a computer or television screen by changing the non-ionising electromagnetic radiation (hereafter referred to as EMF radiation) emitted from computer and television screens.

How does the screenFloww work?

The screenFloww was developed in accordance with the principle of resonance. It consists of a circuit of electronic components which respond to the radiation emitted computer and television screens. The screenFloww resonates with this EMF radiation and creates a subtle but distinct field which is `fed` by the radiation emitted by the screen. This field, which we call a Floww® Field, serves to offset the possibly harmful EMF radiation which is emitted by a computer and television screens whether they are in use or on standby.

Range

The screenFloww creates a Floww Field of approximately one metre around the screen.

What is Floww Health Technology?

Floww International develops and manufactures technological products which utilise radiation to create a Natural Floww Field. The goal of the natural Floww Field is to protect people from radiation using a natural process. The technological products are collectively known as Floww Health Technology. People who use Floww Health Technology report feeling more relaxed and more energetic.

Can EMF radiation influence our health?

The human body can experience disturbances in EMF radiation loaded environments, when the EMF radiation originates from, amongst other sources, wireless internet, transmitters for mobile phones, wireless telephones (DECT) and wireless routers. EMF radiation can be absorbed by the body, which can subsequently affect health and wellbeing.

For information about medical complaints which can be a result of EMF radiation see the warning from German doctors and professors, who have noticed a connection between electromagnetic EMF radiation and a number of medical complaints, such as headaches, fatigue and problems with concentration (source: Freiburger Appeal 09-10-2002). For more information and scientific research regarding EMF radiation and health contact Bio Circuitry.

Use of the screenFloww with other Floww products

The screenFloww was developed to be used on its own or in conjunction with the personalFloww and homeFloww products. The screenFloww is an important additional device because a computer or television screen is a source of EMF radiation to which people are exposed repeatedly and often at close range.

Disclaimer

Floww Health Technology products are not medical devices. You should always consult your doctor if you have a medical complaint. Only use Floww products as advised by your doctor or therapist or as instructed on the instructions for use.

Instructions for use - screenFloww

The screenFloww is suitable for all (TFT, LCD, Plasma and CRT) computer and television screens. The screenFloww can be placed on top of, in front of or behind the computer or television screen.

For best results position the screenFloww as close as possible to the screen in question - no greater than 20 centimetres away. The screenFloww will create a one metre field around the source providing essential protection to the user.

Place the screenFloww rod upright in the holder with the Floww logo running upwards.

NOTE: Never place more than one screenFloww near the same screen. Multiple screenFloww devices in close proximity to one another can disrupt their effectiveness.

Possible withdrawal symptoms

During the first week of use of your screenFloww it is possible you may experience mild withdrawal symptoms which can include mild headache or nausea. We believe this is because the body is no longer being exposed to the distorted frequencies it has become accustomed to. If these symptoms persist for more than a week please contact Bio Circuitry in Australia.

When you first start using Floww Health Technology products make sure you drink sufficient water. The recommended amount for adults is at least 1.5 litres per day. Children over 12 years of age should drink at least 1 litre per day and children under 12 years of age half a litre per day.
